MASTIRID

# MASTIRID<sup>®</sup>

A broad spectrum combination of Cephalexin  
& Neomycin with Prednisolone

**Cephalexin** a bactericidal antibiotic belonging to the Cephalosporin group. It is effective against most of the gram positive bacteria **Viz - Staphylococcus aureus, Streptococcus agalactiae, including resistant varieties of penicillin** (penicillinase positive) that are main causes of mastitis, and moderately effective against gram negative bacteria.

**Neomycin** is a aminoglycoside antibiotic and has an excellent activity against Gram negative bacteria **Viz - E.Coli, Proteus spps. , Klebsiella spps., Salmonella spps.,** etc. and has a moderate activity against Gram positive bacteria.

**Prednisolone** gives a quick local anti-inflammatory effect that allows a more effective reach of antibiotic to the infection site.

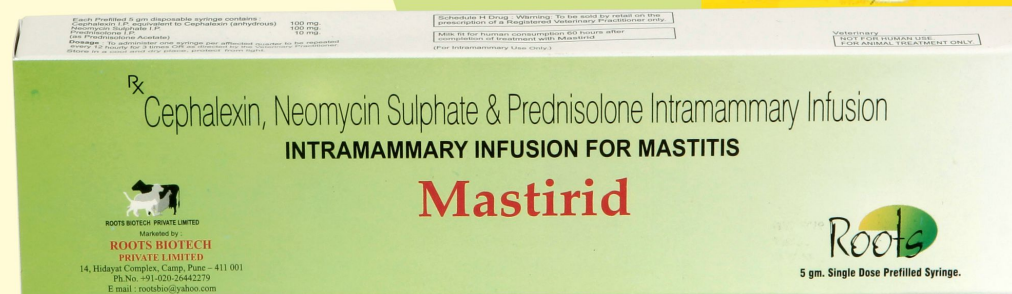

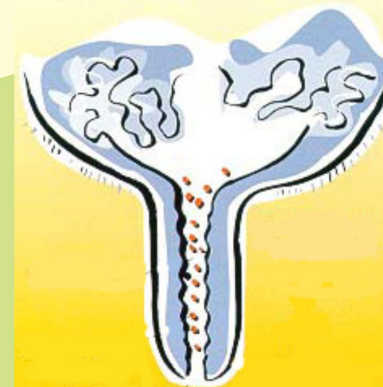

## DOSAGE :

### Cattle :

One syringe (5 gm) per affected quarter every 12 hrs for 3 times or as directed by veterinarian.

### Sheep & Goat :

Half syringe (2.5 gm) per affected quarter every 12 hrs for 3 times or as directed by veterinarian.
